Basic Queries for Book Publishing Data

Brieleigh Wescott
Research Assistant
School of Arts & Communication
Florida Institute of Technology

This guide uses our Dataset A as an example of common SQL queries and their results. This was all done on BigQuery. I hope that this can be helpful for both you to use in future datasets and whomever takes my position after me. Please email me if you have any questions
brieleigh04@gmail.com

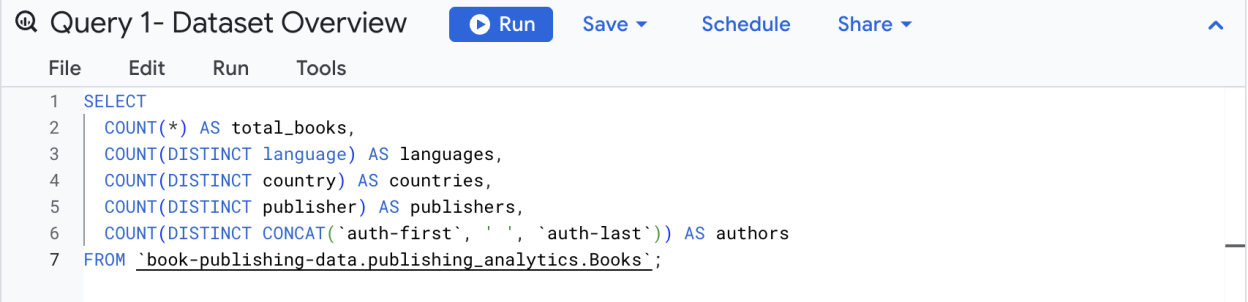

Table of Contents

Query #1: Dataset Overview 2
Query #2: Books by Language 3
Query #3: Amazon Performance by Language 4
Query #4: Amazon vs. Goodreads Performance by Language 5
Query #5: Publisher Performance 6
Query #6: Top-Performing Books by Language 7
Query #7: Translation Performance 8
Query #8: Literary Prestige Performance 9
Query #9: Nobel Winner Performance 10
Query #10: Amazon vs. Goodreads Engagement Ratio 11
Query #11: Translator Performance 12
Query #12: Potentially Underexposed Books 13

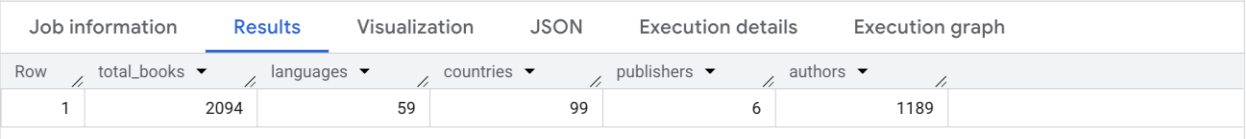

Query #1: Dataset Overview

Description: Counts the total number of books, languages, countries, publishers, and authors in the dataset.

Query:

Results:

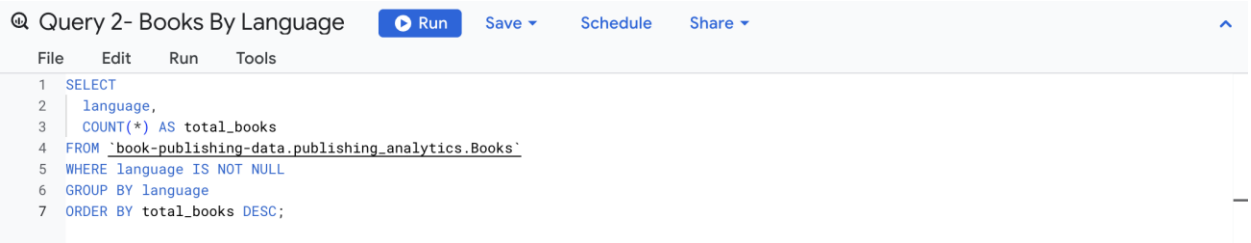

Row	total_books	languages	countries	publishers	authors
1	2094	59	99	6	1189

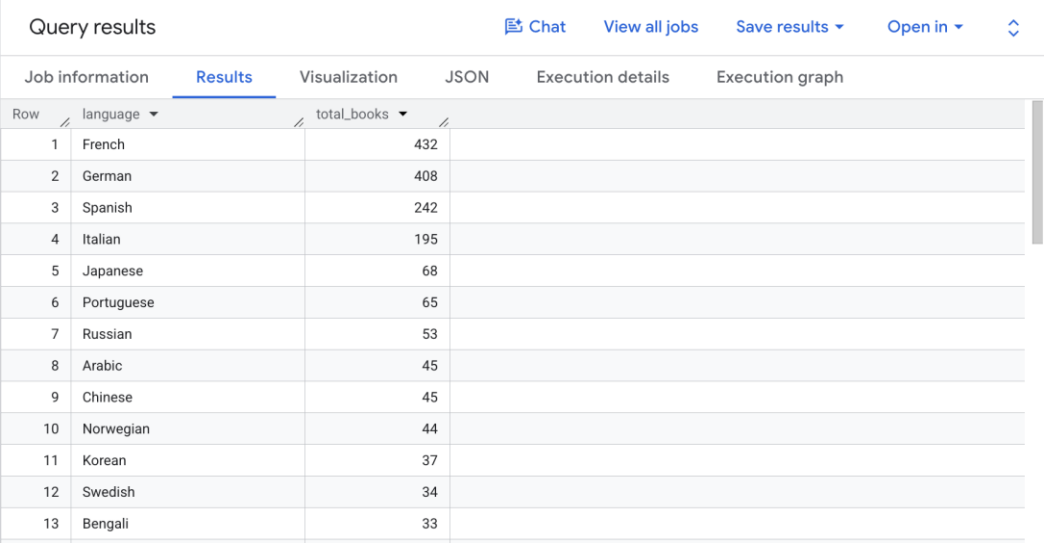

Query #2: Books by Language

Description: Counts the number of books for each language and sorts them from highest to lowest.

Query:

Results:

Row	language	total_books
1	French	432
2	German	408
3	Spanish	242
4	Italian	195
5	Japanese	68
6	Portuguese	65
7	Russian	53
8	Arabic	45
9	Chinese	45
10	Norwegian	44
11	Korean	37
12	Swedish	34
13	Bengali	33

Query #3: Amazon Performance by Language

Description: Calculates the average Amazon rating and Amazon rating counts for each language.

Query:

Query 3- Amazon Performanc... Run Save Schedule Share

File Edit Run Tools

```sql
SELECT
  language,
  COUNT(*) AS total_books,
  ROUND(AVG(`amz-rating`), 2) AS avg_amazon_rating,
  SUM(`amz-rating-count`) AS total_amazon_ratings,
  ROUND(AVG(`amz-rating-count`), 0) AS avg_amazon_ratings_per_book
FROM `book-publishing-data.publishing_analytics.Books`
WHERE
  language IS NOT NULL
  AND `amz-rating` > 0
GROUP BY language
HAVING COUNT(*) >= 10
ORDER BY total_amazon_ratings DESC;
```
